⚜WISA®

REVIT BIM LIBRARY
Ceramics

User Manual

With the help of this document, it is possible to apply the WISA products in projects which are build up in design program Revit.
This document also provides a short explanation of the parameters to be used.

The ceramics of WISA are designed as face-based elements. All families in this library are hosted on a vertical plane except the floor standing toilets.

The naming of the families are fully compliant with the DRS and have the following structure:
RSen_74_PF_FB_etim classification + name product_wisa

The types within families have the following structure:
description_wisa_name product

All families contain a number of parameters which can be changed manually:

Elevation
All washbasins and fountains have their reference level at the upper side of the washbasin/fountain.
At the parameter elevation the mounting height has to be filled in.

Siphon cover
By some washbasins it is possible to order a siphon cover. When checking this parameter the siphon cover appears in model and schedule.
